

1. Background

A small sports shop sells sports shoes, clothing, and accessories to local customers. Currently, the shop operates mainly through offline sales and online orders via Facebook and Zalo messages.

All product information and orders are managed manually without a centralized system.

2. Current Problems

The current business model causes several issues:

- Customers cannot browse products anytime and must contact the shop to get product information.
- Orders are recorded manually using Excel or handwritten notes, which is time-consuming and error-prone.
- The shop owner has difficulty tracking order status such as new orders, processing, and completed orders.
- Product information is not updated consistently, leading to incorrect pricing or stock information.
- There is no centralized system to manage customers, products, and orders.

3. Business Opportunity

Developing an e-commerce website can help the sports shop digitalize its sales process. The system will allow customers to browse products, place orders online, and track order status. For the shop owner, the system will improve order management, reduce manual work, and support business growth.
